

TECHNICAL DATA SHEET

YSESU-APC3 Argon Plasma Coagulation Electrical Unit

Reference photograph. Confirm accessories and configuration in the quotation.

Argon Plasma Coagulation (APC) is an advanced medical technology used to treat various medical conditions. This technique utilizes ionized argon gas to coagulate and cut tissue, making it an unparalleled tool in surgical and therapeutic.

- Highly precise treatment: APC can precisely address tissues at a microscopic level, making it widely used in endoscopy and minimally invasive surgeries.
- Reduced risk of bleeding: Due to its highly coagulative properties, APC can significantly reduce the risk of bleeding during surgery.
- Versatile applications: APC is utilized for treating various conditions, including gastrointestinal bleeding, polyp removal, pulmonary diseases, urinary system issues, and more.
- Rapid recovery: Patients typically experience swift recovery after APC treatment, reducing hospitalization time.
